### Preamble: OGDCL's Integrated HSE System Manual

Controlled Copy Do Not Duplicate For Internal Use Only

## Latest Framework of OGDCL's HSE Management System

### Preamble: OGDCL's Integrated HSE System Manual

Controlled Copy Do Not Duplicate For Internal Use Only

#### **Preamble**

OGDCL has established (developed and implemented) HSE Management System to improve its HSE performance and ultimately to reduce the adverse impact of its operations, activities, and services on 3Ps i.e. people, plant, and planet. The HSE System complies with the latest revisions of international standards ISO14001, ISO45001, ISO31001, ISO50001, Guidelines of The International Association of Oil & Gas Producers (now IOGP and formerly known as OGP) and Process Safety & Risk Management (PSRM) Model.

Effectively mapping and applying 22 PSM Risk-based and Cultural Elements with existing HSE System (*exhibited as Mapping Chart in the proceeding page*) clearly demonstrates an uplifting of HSE standards at OGDCL and also a morale-boost of employees with a reduced number of injuries & incidents. Our commitment is serving as the backbone of entire PSM & HSE drive for sure, and, combined with employee participation, is helping in pursuing the objective "To be Excellence in Process Safety".

Our HSE System's scope covers:

- Engineering / construction operations;
- Exploration, including seismic techniques and geological surveys;
- Drilling of exploratory wells and geological services;
- Drilling and development of production wells; and
- Treatment of oil and processing of natural gas to yield marketable products.

This document describes the way OGDCL is managed with respect to its stated HSE policies and strategic objectives. It ensures that the critical activities of the company are identified, controlled and that measurements are made and reported so as to enable monitoring of overall performance and identification of areas for improvement. This HSE System addresses the organizational structure and responsibilities of people, the management of resources and documentation required for sound HSE performance for all OGDCL activities. The document provides a framework for planning of work activities, which include existing operations, management of changes and developing hierarchy of procedures both for the normal as well as abnormal conditions.

This is a CONTROLLED document and is subject to continual review and update as required. Functional / Line Management is the PRIMARY IMPLEMENTER of HSE management system; However, the CUSTODIAN of HSE Policy Framework and System Manual is the General Manager HSE who is responsible for updating these document as required on behalf of the Chairman or Managing Director & CEO of the company and checking / reporting the compliance level.

OGDCL's HSE Policy Framework and Integrated HSE System Manual is divided into Six (06) Core Policy Framework Elements and Thirty Three (33) Procedures, corresponding to the Main Sections & Subsections of ISO14001, ISO45001, ISO31001, ISO50001 standards and PSM guidelines (exhibited as Outline in the proceeding page).

Instructions and directives for the implementation of HSE system would be issued from time to time. These instructions would be meant for strict compliance and adherence with no room for tolerance or departure. These instructions would be basically to avoid instances of deviation and non-adherence which can potentially cause irreparable damage or injury to the manpower or company assets besides financial and reputational implications.

It is, therefore, strongly advised that HSE system/ standards/ instructions be fully adhered to. Obligation of compliance rests with all employees whereas Head of Departments would be responsible for ensuring that Functions under their jurisdiction are adequately equipped in terms of awareness and availability of tools to meet the HSE system. It may also be underlined that strict disciplinary action may be taken in case of a laxity, omission or negligence in this regard.

(Syed Khalid Siraj Subhani)

Managing Director/ CEO

# Mapping of PSM (22 Elements) Model with OGDCL's HSE Management System

## First Leadershi

- Management Commitment:
  Management is responsible for
  safety of personnel and
  protection of company
  property. Management will
  direct the establishment and
  implementation of safety
  programs through participation
  in various safety committees
  and conducting plant safety
  audits. Management should have
  specific, quantifiable, personal
  safety goals/targets and
  implementation plans, which
  must be stewarded regularly.
- Line Management
  Accountability and
  Responsibility: The purpose
  of this element is to delegate
  HSE responsibility and
  accountability to each level of
  the organization. Line
  supervisors and managers are
  totally responsible and
  accountable for safety as well as
  cost, quality and productivity.
- Policies and Principles: To improve safety, a deliberate safety policy must be established and applied daily by each member of the work force, whether manager, supervisor, or contractor employee. Top management must establish the policy that will spell out the principles that are to govern all decisions regarding safety. Without such a policy, safety tends to be pushed aside when other concerns become pressing.
- Safety Personnel: This element highlights the main responsibilities of safety personnel so that all members of line organization understand the role and place of safety personnel in the organization.
- Integrated Organization for Safety: The purpose of the overall safety organization is to mobilize all available talent in the interest of safety, health, and environmental protection. It does not, in any way, relieve individual members of the line organization of their safety responsibilities. Various committees are staffed principally by members of the line organization supplemented by safety staff members and other specialists.
- Emergency Preparedness and Contingency Planning: The intent of this element is indepth planning for potential emergencies ensuring effective response by site personnel. The outcome of these efforts is mitigation of the impact of incidents on personnel, environment / facilities and prompt control of emergency.

### Second Planning

- Process Safety Information:
  It provides a foundation for identifying and understanding the hazards involved in the process.
  It ensures that PSM goals of HSE are achieved by providing process safety documentation. A PSI package shall be prepared for each process unit. Documents of the PSI package should be maintained up to date for the life of each process unit.
- Risk Assessment and Process Hazard Analysis: A systematic and comprehensive study to identify and evaluate the significant hazards of the process and the safeguards associated with Highly Hazardous Processes (HHP) and Lower Hazard Operations (LHO). Process Hazard Analysis systematically identifies the safety hazards such as potential for fires, explosions and / or release of toxic materials, and is a well-defined program to remove or lower these hazards.
- Goals, Objectives and Plans:
  The purpose of this element is
  to provide guidelines for
  establishing realistic, achievable
  and quantifiable safety goals and
  objectives. Managing safety, like
  managing other aspects of a
  business, includes setting of
  performance goals and
  objectives which should be
  Specific, Measurable, Attainable,
  Result Oriented, Time Bound
  (SMART) and within the sphere
  of influence of the person and
  group who is to be held
  accountable for achievement.

# Third Support

- Information: It provides a foundation for identifying and understanding the hazards involved in the process. It ensures that PSM goals of HSE are achieved by providing process safety documentation. A PSI package shall be prepared for each process unit. Documents of the PSI package should be maintained up to date for the life of each process unit.
- → Effective Communication:
  The purpose of this element is to emphasize and elaborate the importance of effective two-way communication in prevention of occupational accidents/ illnesses and achieving safety goals and objectives.
- Training and
  Development: This element
  signifies that all personnel
  whose work could affect the
  safety of the site must have,
  and maintain, the necessary
  knowledge and skills to
  execute their job functions in
  a manner consistent with the
  safe operation of the site.

## Fourth Operation

- Procedure and Performance Standards:
  This element provides standards of performance including such items as rules, procedures, and design criteria that specify how activities are to be done. They should be written, practical, and available at the point of action, reviewed regularly, followed, and enforced. Adherence to standards must be enforced, even to the point where adherence becomes a
- Pre Startup Safety
  Review(PSSR): PSSR
  provides a final checkpoint for
  new and modified equipment
  and facilities to confirm that all
  appropriate elements of
  Process Safety Management
  have been addressed
  satisfactorily and the
  equipment / facility is safe to
  start-up. It is mainly intended
  to make sure that alterations /
  additions to the process or
  system do not create hazards
  to personnel at the site,
  surrounding facilities,
  community and environment
  by inadequate, incomplete, or
  unauthorized design or
  installation.
- ♣ Contractor Safety

  Management: The intent of
  this element is to make
  contractors responsible for
  effectively meeting the safety,
  health and environmental
  requirements. It covers safety
  expectations of contractors
  with safety performance of the
  contractor as the top most
  priority.

### iifth Performanc Evaluation

- Quality Assurance (QA):

  QA is important for new facilities and revisions or repairs to existing facilities to ensure that safety critical equipment which handles hazardous material (as it is fabricated) is suitable for the process application. It also ensures that safety critical equipment installed is consistent with design specifications and manufacturer's recommendations.
- Mechanical Integrity: This element addresses equipment tests and inspections including predictive and preventive maintenance, reliability engineering, maintenance procedures, quality control procedures, training and performance of maintenance personnel. All of these mechanical integrity efforts ensure an incident free and reliable operation, and they help to pin point root causes and avoid incident recurrence and pre-mature failures.
- Audits and Observations:
  This element covers the importance of effective auditing in site safety management and provides guidelines for conducting and evaluating safety audits.
- Integrated Organization for Safety: The purpose of the overall safety organization is to mobilize all available talent in the interest of safety, health, and environmental protection. It does not, in any way, relieve individual members of the line organization of their safety responsibilities. Various committees are staffed principally by members of the line organization supplemented by safety staff members and other specialists.
- Motivation and Awareness:
  The purpose of this element is to discuss and provide guidelines on different concepts and recommended practices on progressive motivation. Internal motivation is necessary to sustain highlevel safety performance once that level of performance has been reached. External motivation is necessary to make the initial transition to high level safety performance because of established behavior patterns in the individual.
- Integrated Organization for Safety: The purpose of the overall safety organization is to mobilize all available talent in the interest of safety, health, and environmental protection. It does not, in any way, relieve individual members of the line organization of their safety responsibilities. Various committees are staffed principally by members of the line organization supplemented by safety staff members and other specialists.

# Sixth Improvement

- Incident Investigation and Communication: The purpose of this element is to document the process for investigating incidents that occur onsite or off-site in a way that promotes thorough and efficient investigation in a timely manner; uniform, accurate, clear, and concise documentation and reporting; identifies and implements recommendations to prevent incident recurrence; involves the right people to get the information; ensures a clear understanding of key factors and key learnings; participating personnel obtain a positive learning experience.
- Management of Change Facility and Technology: Processing plants are designed according to standard engineering practices. The changes to the documented process safety information (e.g. hazard of materials, equipment design basis and process design basis), even if subtle or temporary, can lead to catastrophic events. Therefore, these changes must be managed in such a manner that safety, the integrity of the plant and the environment are not compromised. All changes must receive appropriate review and authorization before being implemented
- Management of Change Personnel: Safe operations of
  facilities require an effective
  personnel change management
  system as people are the
  essential ingredient in "Process
  Safety Management" and play
  the most important role in its
  implementation and day to day
  compliance. It is essential that
  personnel changes at all levels
  are controlled according to a
  pre-established criteria so that
  minimum levels of experience
  and knowledge are maintained
  at the site.
- Pre Startup Safety
  Review(PSSR): PSSR provides
  a final checkpoint for new and
  modified equipment and
  facilities to confirm that all
  appropriate elements of
  Process Safety Management
  have been addressed
  satisfactorily and the equipment
  / facility is safe to start-up. It is
  mainly intended to make sure
  that alterations / additions to
  the process or system do not
  create hazards to personnel at
  the site, surrounding facilities,
  community and environment by
  inadequate, incomplete, or
  unauthorized design or
  installation.
